Technical Competence

- Programming**
Java, C#, React, Angular, XML
- Frameworks**
Spring Boot, Spring Security
- Databases**
MongoDB, MSSQL, MySQL
- Developing Tools**
Git, Docker, VS Code, Postman, Github Projects, Github
- Design, creative**
Figma, GIMP
- Test**
JUnit, Mockito
- Cloud**
AWS, Render.com, Netlify.com

Certification

AWS - Cloud Practitioner (1/9 2025)

Languages

- English - Fluent
- Swedish - Native
- Spanish - Basic
- Russian - Basic

Interests

- Workout
- Nature/Outdoor life
- Obst. Course Race
- External monitoring/
- Family
- News
- Application Security

CRISTOFFER ÖSTBERG

PROFILE

Certified AWS developer with Java as primary language. Careerchange from teacher and fire engineer where Spring Boot together with Maven and Java 21 are go-to libraries. Primary deploys are webapplications in both AWS, Azure and clouds such as Render and Netlify but also desktop apps.

Use Docker extensively with MQ as example and frontend with primarily Angular, but also React where several full-stack projects have been developed. Like communication between machine-machine and human-machine in general, and enjoy clean code and collaboration. Being a single-point of success or failure for a company is something I never would like to be.

EXPERIENCE

Teacher substitute

Härryda Municipality

2025 jan - ongoing

- Trying to best convey the knowledge learned so far in life to the children in Härryda.

Software Developer

Latera Racing AB

2024 may - 2025 nov

- Did complete pre-analysis of new racing software for indoor RC cars, from both owner and customer perspectives.
- Improved user experience by redesigning the race management UI. Main language Python with Kivy framework.

FireEngineer, FireFighter, Coordinator

Coor, Consultancy to Volvo Cars

2015 jul - 2022 oct

- First 2 years managed 750,000 sq m of property all by myself, expanded despite this contract to 900,000 sq m.
- With highest academic level (in fire engineering) was a constant source of information. Tried to the best of ability to pass this on to teammates. Having a nice team and teamculture is important.
- Accuracy and delivering the best transparency to the customer were what kept our contract in place throughout employment.

EDUCATION

Developer Java - Integration

Campus Mölndal

2022 nov - 2024 nov

- Klassrepresentant då ingen annan ville - jag ville se vad jag kunde bidra med för att få klassen att lyckas.
- Hantrade Java OOP, Spring Boot, IAM (Spring Security, Oauth) Databases, API, Quality assurance, Cloud, Microservices, Frontend (HTML, JS/TS, CSS)

Fire, Rescue and Safety Work

MSB

2012 feb -2014 feb

- Highest governmental education in sweden to become both preventive and operational firefighter.
- Tried to the best of my ability to make and give the most out of this ed.

Teacher

Uppsala University

2009 jan -2010 jun

- First attempt at higher studies after high school, which simply wasn't the right thing at the time.

Projects

Projektatorn [Java / Angular / MongoDB / RabbitMQ]

<https://www.projektatorn.se>

[Server](#)

2025 juli - 2025 juli

[Client](#)

2025 juli - 2025 juli

Project where the application aims to generate programming projects using the API from Google Gemini as a GPT model.

- Create account, create friends, chat in real time using RabbitMQ as a microservice in between.
- Generate ideas on the main page using the LLM API, choose to share with existing friends, email notification of new project ideas, UI in chat list for selection+accept and sharing projects.
- End-to-end encrypted using public and private keys which both have RSA (simpler chat messages) + AES (for larger messages such as projects)

Flakeville [Java / React / Azure / MongoDB]

<https://flakeville.netlify.app>

[Server](#)

2024 feb - 2024 mar

[Client](#)

2024 mar - 2024 may

Degree project training Java developer - Integration. The project concerns a fictional ski resort web application for several roles. The project was intended to both include existing technologies and add new ones.

- A total of 3 roles (admin, employee, user with complete IAM) External API with weather service, shop, lift management with employee log, order history for users
- Server + Client launched on separate services. Server Azure and Client Netlify. Complete CI/CD. Today's existing microservice RabbitMQ via Render.com
- Backend Java Spring Boot, Frontend Javascript with React + Vite, Cloud Azure, storage MongoDB.
- Unit tests in JUnit and Mockito.

E-store [Java / Thymeleaf / MySQL]

[Problemlosarna E-Store](#)

2023 dec - 2024 jan

Fullstack E-commerce where users can buy goods and saves order history to database. IAM. First Fullstack project with both server + client that was done. Team of 4 people, where personal responsibility was frontend and ThymeLeaf and JavaScript. Mutual and mature and good communication throughout the project.

- Server Spring Boot, client Thymeleaf med HTML, Javascript.
- Database MySQL.

Privat Projekt [Java / Angular / PostgreSQL]

[Bigger private project](#)

2025 april - pågående

Larger private project right now - if interested, access may be available. The project mostly involves Java in Spring Boot as a server with Angular as a client, data management is via PostgreSQL. API retrieval from external API sources is available and RabbitMQ for chat is available in this application.

- Complete IAM with both admin and user, secure handling via token and encryption/decryption.
- A lot of CRUD in the application in general and towards the database.
- A lot of focus and time is spent on system understanding and optimization to ensure as clean and scalable a base and code as possible, so it is easy to expand/debug and more people to get involved in.
- External API with geo-location.
