Skills

- Problemsolver
- Teamworker
- Geek

Verbal & written Languages

- English - Fluently
- Swedish - Native
- Spanish- A little
- Russian - A little

Merits

- **Class Representative** - Java Integration
- **Well-being coordinator** - SMO
- **Safety representative** - Military
- BC - Drivers License (Car+truck)
- Coordinator Education
- Military - Squadleader

References & Certificates

References, certificates, and grades are available and can be provided upon request.

CRISTOFFER ÖSTBERG

SYSTEMS DEVELOPER

Summary

Since childhood creating in several different ways, now the creation has shifted to primarily digital tools. System developer with main focus Java and C# but also full stack and frontend skills in mainly React.

Background in both pedagogy, logistics and security and has both a brain for logic and a heart for collaboration.

Looking to change my status from 209 to 200.

Education

Javadeveloper Integration

Campus Mölndal | 2022 - 2024

- Class representative 1 year (2023-2024)
- Common Java, Springboot, Spring security, Databases, API:s, Tests, Cloud

Firefighter

Fire, rescue and safety work (SMO) | 2012-2014

- Swedens one only firefighter academy, MSB. School Sandö Ångermanland. Operative + preventive.
- Well-being coordinator.

Teacher

Uppsala University | 2009-2010

- Teacher for short time before getting into former dream education firefighter.

Work experience

Systems developer

Latera Racing AB | 2024

- Internship as system developer Latera Racing AB. Main language Python.

Fire technician, Firefighter | [Consultant]

Coor Service Management | Volvo Cars | 2015 - 2022

- Fire technician and firefighter (as well as a bit of a coordinator) in recent years over half of the Volvo Cars area at Torslanda Gothenburg. Consultancy.
- Daily care, operation 24/7, alarms, problem solving, Excelprogramming

Firefighter

Falck Sweden | 2018 april - 2018 august

- Radionuclear firefighter shortterm employ Ringhals nuclear power plant

Firefighter

Swedish armed forces F7 | 2014 - 2015

- Airforce firefighter F7 airport Sätenäs.

Warehouse worker

ICA Sweden | 2005 - 2011

- Warehouse worker and truck driver. Responsible for loadout/scanning/quality. Also wares come to store whole, clean and well-packed. A lot of own responsibility.

Technical competence:

BACKEND

- **Java**
 - OOP
 - Spring Boot, Spring Security
 - Lombok
 - Maven, Pom etc
- **C#**
 - .NET8 core
- **API**
 - RESTful API, SOAP API
- **Databases**
 - SQL, SQLite, MySQL
 - MongoDB
- **Architecture**
 - UML, ERD
- **Quality**
 - JUnit, Mockito
- **CI/CD**
 - Devops
 - Jenkins, Github Actions
 - AWS CI/CD Pipeline
- **Cloud**
 - AWS, Microsoft Azure
 - Netlify
- **Packaging/Containerization**
 - Docker
- **Git**
- **Github**
 - Markdown

FRONTEND

- **HTML**
- **CSS**
- **Javascript**
- **Thymeleaf**
- **Ramverk**
 - Node.js
 - npm
 - React
 - Vite
- **Graphics**
 - Photoshop
 - GIMP
- **IDE**
 - IntelliJ
 - VS Code

Projects

2024

Flakeville [Java / React / Azure / MongoDB]

<https://github.com/Cristoffer85/flakeville-server>

<https://github.com/Cristoffer85/flakeville-client>

- Degree project for training Java developers - Integration. The project follows a fictitious Ski Resort web application for several roles (Admin, Employee + User). The project was supposed to include as many of all the parts we acquired in training as well as the addition of new techniques.

The project built in two parts with API for communication. Backend in Java Spring Boot and Frontend in Javascript with React + Vite.

Tests in JUnit and Mockito as well as database in NoSQL (MongoDB) backend were launched on Microsoft Azure (Test period 1 month - Spring apps) and frontend on Netlify. API with weather service with snow depth (PowderTracker) integrated in application, together with store, several resources either privately created or, as main background image generated and produced using generative AI.

2024

ByteBook [C# / .NET / React]

<https://github.com/Cristoffer85/ByteBook>

- Social media application for developers where they can connect, talk, solve and talk about various coding problems, see FAQs, talk/bind any future business contact or just hang out together and share funny memes or other media of your choice.

Backend is built in C# with ASP.NET8 core and SQL Server and Frontend in React.

2023

Latera Race Tracer [Python / Kivy]

<https://github.com/Cristoffer85/LRA>

- Timing application for RC motorsport (indoor) where users can set up their own customizable races depending on the group of friends or if you just want to drive yourself for a little while. Uses built-in transponders (chips) in the cars for location data and then passes that data through a central router that sends the data into the application.

The application is designed for several screens of different sizes, hence a requirement that it had to be responsive, and it would also primarily be used on a touch device for ease of use. Therefore, the choice fell on Python with the Kivy framework as an alternative.

2024

Problemlösarnas E-store [Java / Thymeleaf / MySQL]

https://github.com/Cristoffer85/Problemlösarna_E-Store

- Fictitious E-commerce store where you can buy goods and put them in a shopping basket, when a campaign/button is pressed, it sends off the order and saves previous purchases in a history in the database. Authentication and authorization are included. First Fullstack project with API management between server and client that was done, in a team of 4 people.

Backend/Server is in Spring Boot while Frontend and Client are in HTML + Javascript and Thymeleaf. The database was in MySQL, and my main area in this project was more Frontend and Javascript.

2024

HoneyComb Havoc Profile [Java / React / AWS]

<https://github.com/Cristoffer85/HCHFrontV2>

- Profile page for a fictitious game, and also has an associated Server application which is currently private (for now due to password reasons but can be arranged) Also first project which was tested on React (.js) as language.

First Fullstack project that was deployed in the Cloud (AWS) and with a Cloud-CI/CD (pipelines)
